

Practical Name: HANGMAN GAME Practical No. 06

AIM:- Write a program to implement Hangman game using Python.

CODE:-
import string
import getpass # So secret word isn't shown when typed

```
def getAvailableLetters(lettersGuessed):
    fullstring = string.ascii_lowercase
    lettersLeft = ''
    for letter in fullstring:
        if letter not in lettersGuessed:
            lettersLeft += letter
    return lettersLeft
```

```
def getGuessedWord(secretWord, lettersGuessed):
    wordGuessed = ''
    for letter in secretWord:
        if letter in lettersGuessed:
            wordGuessed += letter
        else:
            wordGuessed += '-'
    return wordGuessed
```

```
def isWordGuessed(secretWord, lettersGuessed):
    for letter in secretWord:
        if letter not in lettersGuessed:
            return False
    return True
```

```
def hangman(secretWord):
    guessesLeft = 8
    lettersGuessed = []
```

```
print("Welcome to the game Hangman!")
print("I am thinking of a word that is ' +
      str(len(secretWord)) + ' letters long.\n")
```

```
while guessesLeft > 0:
    if isWordGuessed(secretWord, lettersGuessed):
        print('Congratulations, you won!')
        return
    print('You have ' + str(guessesLeft) + ' guesses
          left.')
    print('Available Letters: ' + getAvailable
          Letters(lettersGuessed))
    user_input = input('Please guess a letter:')
    user_input = user_input.lower()
```

```
if not user_input or len(user_input) != 1
    or not user_input.isalpha():
    print("Invalid input. Please enter
          a single alphabetic character.\n")
    continue.
```

```
if user_input in lettersGuessed:
    print("Oops! You've already guessed
          that letter: " + getGuessedWord(
            secretWord, lettersGuessed) + '\n')
elif user_input in secretWord:
    lettersGuessed.append(user_input)
    print("Good guess: " + getGuessedWord(
            secretWord, lettersGuessed) + '\n')
else:
    lettersGuessed.append(user_input)
    print("Oops! That letter is not in my word.")
```

```
getGuessedWord(secretWord, lettersGuessed) + '\n')
guessesLeft -= 1
print("Sorry, you ran out of guesses. The word
was " + secretWord)
```

```
# Main program: take secret word input from
# user (hidden for fairness)
print("Enter the secret word for Hangman
(it will be hidden):")
secretWord = getpass.getpass("Secret Word:").lower()
hangman(secretWord)
```

OUTPUT:

Enter the secret word for Hangman (it will be hidden):
 Secret Word: doll
 Welcome to the game Hangman!
 I am thinking of a word that is 4 letters long.

You have 8 guesses left.
 Available Letters: abcdefghijklmnopqrstuvwxyz
 Please guess a letter: a
 Oops! That letter is not in my word: _ _ _ _

You have 7 guesses left
 Available Letters: bcdefghijklmnopqrstuvwxyz
 Please guess a letter: l
 Good guess: _ _ ll

You have 7 guesses left.
 Available Letters: bcdefghijklmnopqrstuvwxyz
 Please guess a letter: o
 Good guess: - oll

Practical Name: HANGMAN GAME Practical No. 06

You have 7 guesses left

Available Letters: bcdefghijklmnopqrstuvwxyz

Please guess a letter: r

Oops! That letter is not in my word: -oll

You have 6 guesses left

Available Letters: bcdefghijklmnopqrstuvwxyz

Please guess a letter: d

Good guess: doll

Congratulations, you won!

=== Code Execution Successful ===

AIM:- Write a python program to remove stop words for a given passage from a text file using NLTK.

```
CODE:- import nltk
        nltk.download('stopwords')
        from nltk.corpus import stopwords

        def remove_stopwords(text):
            stop_words = set(stopwords.words('english'))
            words = text.split()
            filtered_words = [word for word in words
                              if word.lower() not in stop_words]
            return ' '.join(filtered_words)
```

```
file_path = 'input-text.txt'
```

```
try:
    with open(file_path, 'r') as file:
        text = file.read()
```

```
    cleaned_text = remove_stopwords(text)
```

```
    output_path = 'cleaned-text.txt'
    with open(output_path, 'w') as file:
        file.write(cleaned_text)
```

```
    print(f'Stop words removed. Cleaned text
            saved in {output_path}')
except FileNotFoundError:
    print('Text file not found. Please check
            the file path.')
```

```
except Exception as e:  
    print(f'An error occurred: {e}')
```

INPUT TEXT FILE (input-text.txt):

This is a simple example to demonstrate how stop words can be removed from a passage using NLTK library. The program reads the entire content from a text file and filters out common English stop words.

OUTPUT TEXT FILE (cleaned-text.txt):

simple example demonstrate stop words removed
passage passage using NLTK library.
program reads entire content text file
filters common English stop words.
